

Plant Health

The property is located within the management zone for *Phytophthora ramorum* and this disease is widespread across the property. Where practical, infected Larch will be a priority for felling.

Archaeology

Archaeological sites have been identified within the forest area. All operations will adhere to UKFS guidance on historic features.

Any further historic features discovered during operations will be reported to the relevant authority.

Ancient Woodland

Ancient woodland sites will be maintained for biodiversity and natural reserves.

Non-native conifers will be removed from these sites during the forest plan and restocked or be allowed to naturally regenerate with native broadleaves.

Timber Transport

Timber will be transported from site along the B734, which is designated as a consultation route by the STTF.

Landscape

No formal landscape designations affect the property.

Due to the location and topography Pinclanty is not prominent in the landscape and views to the property are limited.

The shelterbelts and policy woodland on the northern side of the river and lower slopes on the southern side are prominent in the landscape. Most views are medium to large scale from the B734.

River Stinchar

Watercourses across the site drain into the River Stinchar.

Forests and Water Guidelines (5th ed.) will be adhered to during all operations.

Overhead Powerlines

OHPLs run within the forest area and across access tracks.

These will be a constraint to felling operations and machine access to the site.

Public Access

Pedestrian access to Minuntion is permissive as per the Land Reform Act (2003) and Scottish Outdoor Access Code (2005).

Formal access provisions are provided within Pinclanty. Signage, diversions and, where necessary, path closures will be provided on these to ensure public safety during operations in these areas.

UKFS

Restructuring will adhere to UKFS to maintain the structural and age diversity within the forest,

Deer

Red, Roe and Fallow deer are present within the property.

Numbers will be controlled by a competent wildlife controller in line with SNH Best Practice guidance.

Red Squirrel

Restructuring will maintain the vertical structure, small seeded conifers and diverse broadleaves that provide habitat for this species.

Minuntion
